

Starting with concept creation, using our creative flair mixed with eCommerce technical best practice, we will design and storyboard a web site(s) to meet your objectives, whatever they may be.

Using dynamic designs, with not a template in sight (or, indeed, on your site!) we can produce fresh and innovative web sites, articulating your brands in an attractive and clear manner to provide your customers with a better shopping experience that is engaging, dynamic and easy-to-navigate, resulting in a successful sales channel and reduced abandon rates.

Getting your customers to stay focused on your website can involve them "liking what they see". Complete Commerce can adapt to this by offering unique designs created especially for you.

Each eCommerce site has to have its own identity. It doesn't have to be flashy for the sake of it, it needs to communicate with the potential users of the site. It needs to make them feel connected to the site, like they belong, so that they never have a need to look elsewhere. The Cool Air site, we feel, captures and conveys the message of a car enthusiast, bringing to life the detail that they are interested in.

Creating dynamic eye-catching headings will direct users to the parts of the site you think they would be interested in, or the places you want them to be visiting.
