

# CLOUD HOSTING SOLUTIONS

**Cut costs and increase your computing agility by running your workloads on VI's state-of-the-art cloud platform.**

You have more important things to do than worry about the performance, stability and security of your website and applications hosting platform. That's why we're here to help.

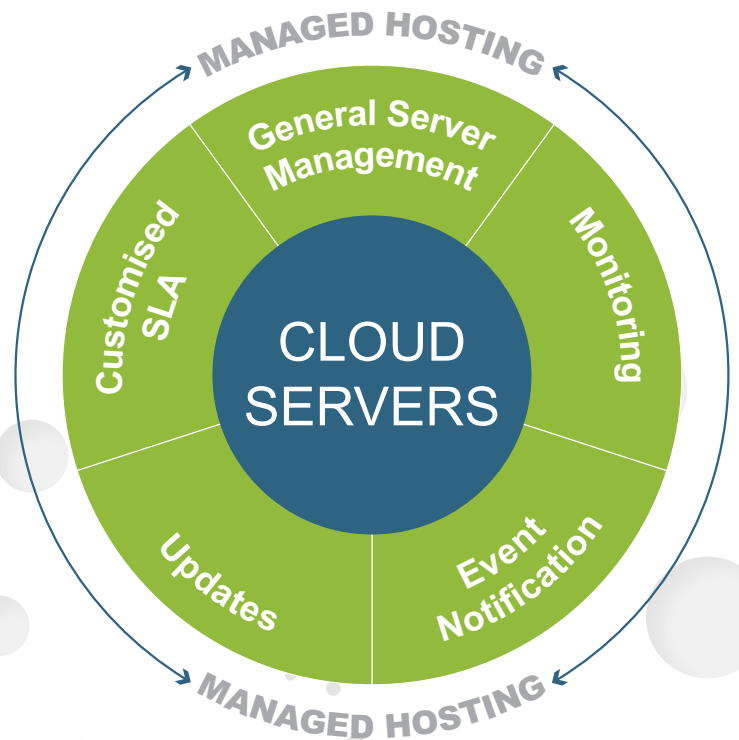

## WHAT IS CLOUD HOSTING?

Say goodbye to the traditional inflexible, expensive, and productivity draining in-house hardware infrastructure strategy. By taking your hosting infrastructure into the cloud, you can free your internal IT resources to focus on the projects that really matter to your business.

Instead of buying potentially costly and over spec'd servers, VI's cloud solutions can save you up to 70% of your annual hosting costs whilst improving overall performance. With cloud hosting, you only pay for the resources that you need, and benefit from the significant cost savings as well as economies of scale.

Flexible and fail-safe, VI's cloud is a self-healing virtual infrastructure, delivering continuous network uptime and freedom in terms of the management of operational systems, load balancing, and overall resource utilisation.

Choose managed cloud hosting and our expert staff can look after all the technical details, so all it takes is a phone call to add a server, change your storage resources or add extra features like redundancy.

## WHY CLOUD HOSTING?

- **reduced capital costs:** pay only for the resources you need each month, while benefiting from the latest hardware technology as it comes available
- **increased flexibility and IT agility:** increase your computing capacity in an instant to meet spikes in demand or predictable growth, and add new servers in seconds, not days or months
- **more productive IT staff:** so your staff can concentrate on tasks that directly benefit your bottom line, we can look after day-to-day management chores like operating system patching and updating

*“Cloud hosting gives me the flexibility my business needs. At our fast-moving pace, it's great to be able to make changes on the fly without lengthy discussions or new paperwork.”*

*“We thought we could do it all in-house, but VI have saved us so much time, money and stress.”*

# CLOUD PORTFOLIO

## ENTERPRISE CLOUD HOSTING

Our enterprise cloud is built on VMware™ virtualisation technology with full hardware and network redundancy including redundant hardware firewalls. VI's enterprise cloud solutions can be ideal for e-commerce and high-traffic sites, and in circumstances where security, privacy and performance are vital.

## VIRTUAL DATACENTRE

VI's Virtual Datacentre with VMware is a great fit for organisations looking to host their own clients' websites and applications. With our technology, you can provision your own virtual machines, choose your operating system, then add, remove, and reallocate capacity across your virtual servers as and when needed.

## ENTRY-LEVEL CLOUD HOSTING

The OnApp™ VPS is designed to get your testing and deployment environment up and running in record time. Test your software and access enterprise-like features at lower entry-level costs. Scale at your own pace and customise as you wish. Public and private cloud options are available.

## IT SOLUTIONS

We bring the same dedication and expertise to security and business continuity that we do to our hosting. Add any number of IT solutions to your cloud including PCI compliance, database hosting, application hosting, security audits monitoring and reporting, and disaster recovery.

## MANAGED AND COMPLEX HOSTING BY VI

We provide proactive delivery and tailored hosting solutions backed by our leading customisable SLAs. With VI managing your cloud servers, you're guaranteed a reliable platform without the hassle of updating and maintaining the infrastructure that goes with it. VI takes full responsibility for your hosted environment, from monitoring and log rotation to business continuity and capacity planning.

## ABOUT US

Virtual Internet specialises in high availability managed hosting for mission critical websites and applications. Since 1996 we have worked with organisations from a variety of industries and backgrounds to build custom hosting solutions that meets their unique business requirements with absolute precision.

### TECHNOLOGY AND INFRASTRUCTURE

We've invested significantly in our dedicated network infrastructure, and our state-of-the-art IP network. We operate Tier 4 datacentres that deliver top security and reliability, and our 40 Gigabit network brings a level of bandwidth capacity that few hosting companies can equal.

### VI-TAL SUPPORT

Our team of experts take care of the technology so that your staff can get on with delivering your business. You have a dedicated, technically qualified, account director plus access to a team of on-call engineers to provide answers when you need them.

### ACCREDITATIONS

We hold ourselves to a high standard and retain accreditations from leading industry bodies. We hold ISO 9001 and ISO 27001 qualifications as well as Prince2 and ITIL certifications for project management, so we can deliver confidently on complex migration and implementation projects.
